PROJECTS AND FREELANCE

Project : **ERP System**
Complete ERP System having 20+ advanced features built using Django.

Freelance : **Silicon Technodium -**
`https://technodium.silicon.ac.in`

Developed the entire website of Silicon Technodium 2021 (frontend, backend, database) and hosted the website on AWS servers, also took help of AWS Lambda functions for the API endpoints. This website also has Payment Gateway integrated with email and SMS based OTP authentication.

Freelance : **Silicon Review System -**
`https://commentario.silicon.ac.in`

Developed the entire review website of SiliconInstitute of Technology. With this system, students can review their college, and this review is sent to third party review websites with the help of REST APIs. For calculation of Review points, mood detector API has also been integrated. This is a OTP Authentication based website.

Freelance : **New Life Academy -**
`https://www.newlifekesinga.com`

Developed the entire website of New Life Academy. This website also has an admin panel, wherein all info can be uploaded, edited, deleted. Admin Panel achieves all its tasks with the help of AJAX calls. Admin can reply to incoming contact requests and en email is auto-sent with the admin's reply.

Freelance : **LMS -** `https://learn.soumit.in`

Developed an entire LMS Platform added with the functionality of taking online exams for my father, who is also a tuition teacher. The platform has course management, student and batch management, course materials upload, home work submission facilities. For the examination system, there are many anti-cheating measures like tab change notifier, auto-submit on time over, freezing system actions, non-downloadable question paper, and resume exam from the time left, even if there was an internet connectivity or logout issue.

Freelance : **Silicon Events Repository -** `https://events.silicon.ac.in`

WORK EXPERIENCE

Internship - Backend API Developer
Digilocker - Government of India

📅 December, 2020 - May, 2021   📍 Work From Home
